

FIXTURES AND GAUGES FROM EUROPE

Premium quality, competitive price

Our company, **Mattor Group** is situated in a small, but highly developed European Country. **Hungary** is the little tiger of Central and Eastern Europe with its advanced car industry. The strict requirements of the local car manufacturers (Audi, Mercedes, Suzuki) resulted rapid and recognisable technical development in the Hungarian automotive sector including those Hungarian suppliers that are involved in mechanical engineering and automation.

Our company is specialised on the design and manufacturing of checking fixtures for the machine and automotive industry. Annually we produce 50-100 custom-made jigs and gauges.

INTERNATIONAL PRESENCE

FIXTURES AND GAUGES FROM EUROPE

From the design to the finishing

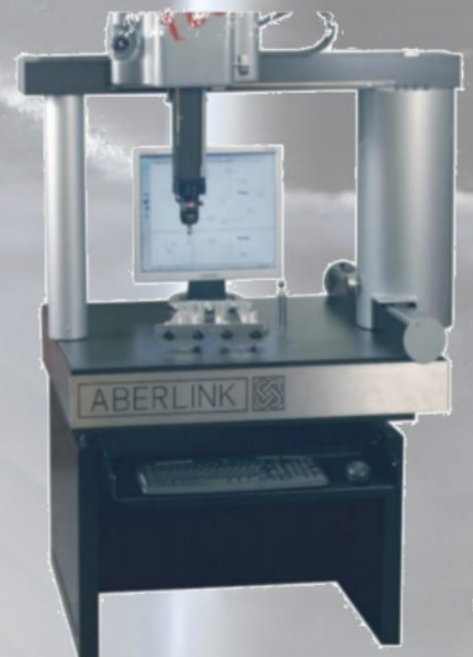

As the whole process takes place in our production plant, we are able to quickly respond to our customers' needs and can make rapid decisions. Our colleagues are committed to our quality policy, which guarantees that all the jigs will be produced within the established tolerance.

Our internal quality management system is strict, therefore all the spare parts are engraved during the production before we install them.

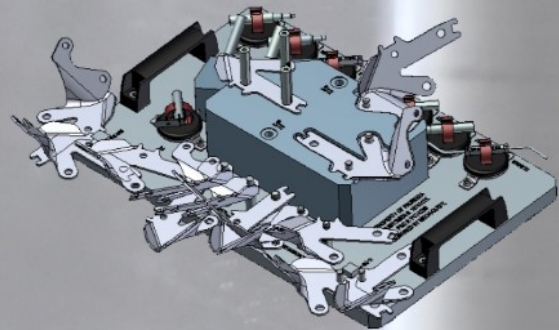

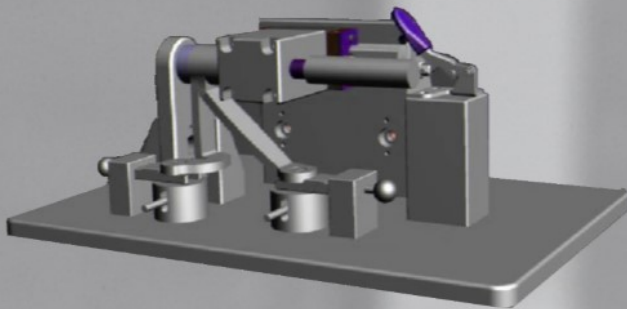

The components and the assembled jigs are measured in our own measuring lab that has all the necessary equipment for the 100 % checking of the parts we manufacture.

FIXTURES AND GAUGES FROM EUROPE

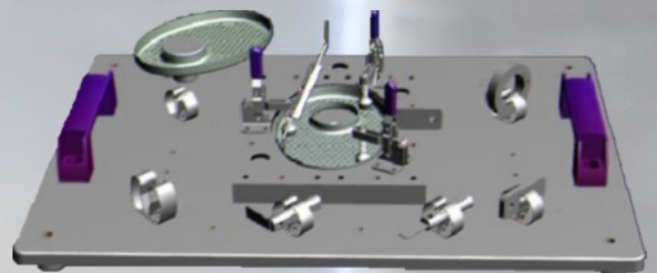

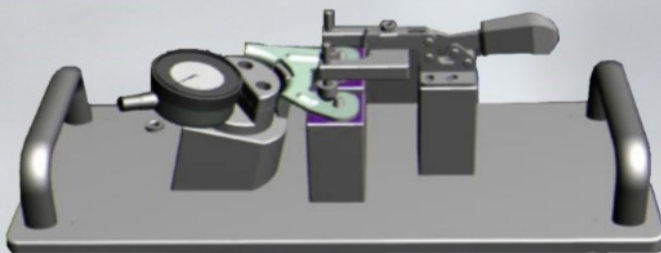

Fixtures for mechanic control

In case you need to control the shape, the position or the mountability of your products during the manufacturing process, **contact us and request an offer for fixture design and manufacturing.** With a team of 20 experienced engineers we will design the fixtures on demand, and will send the concept and the 3D model together with the offer and the expectable lead time.

Gauges with meters and go/no-go check

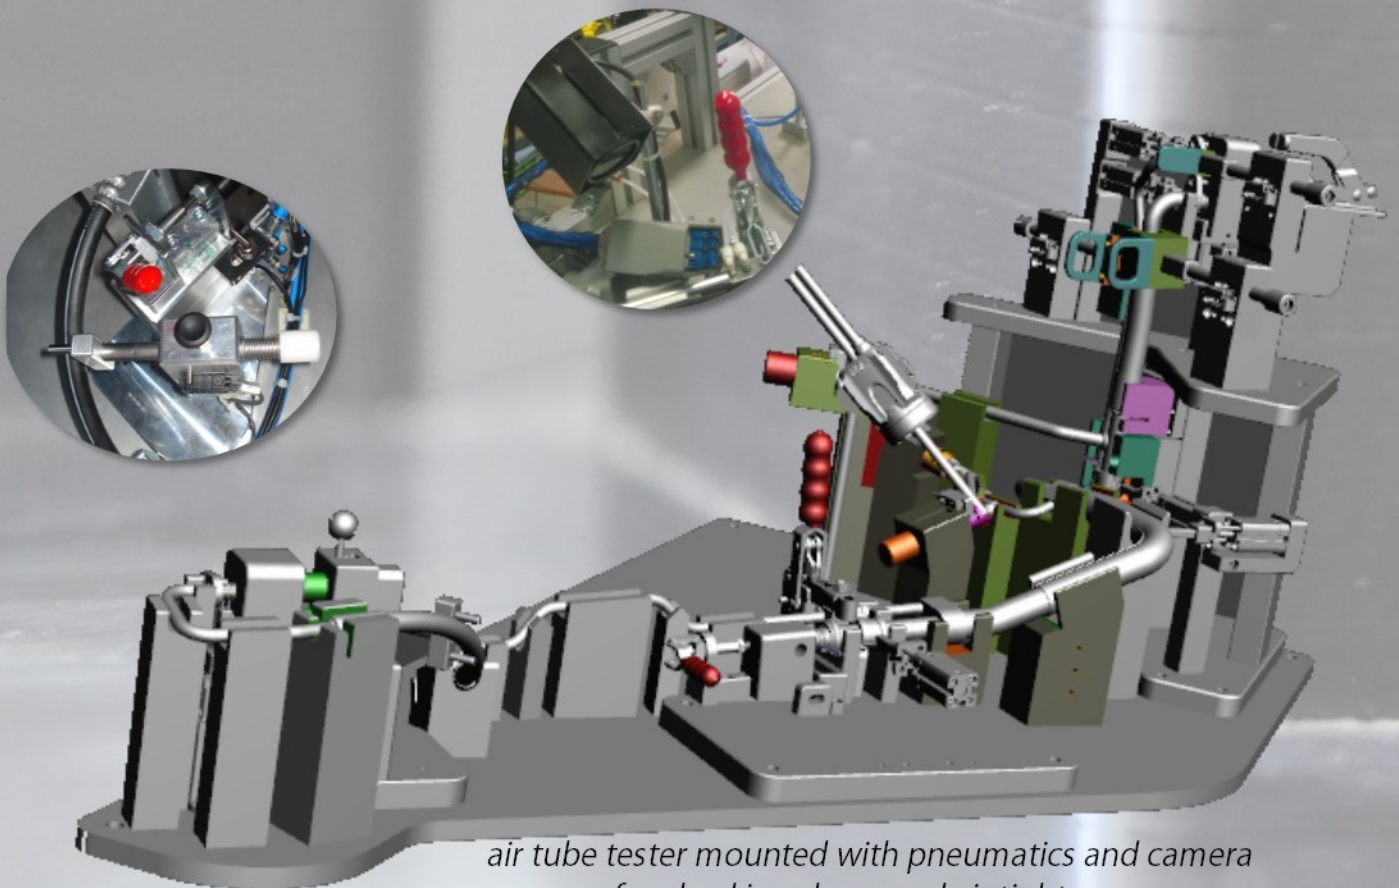

When it is appropriate, we build the fixtures with meter and/or go/no-go gauges. As we are very keen on the dimensional accuracy and the sophisticated finishing, all the components go through several in-process measurement controls before the installation.
